NEW UMD STUDY: SUPPORTING YOUTH AND YOUNG ADULTS WITH ASD IN THE WORKPLACE

WHO: Participating pairs of:

1. **Vocational Training Personnel** (i.e., job coaches, transition specialists, workplace managers, employers, etc.): Must be at least 18 years old, currently provide on-the-job support to a youth or young adult with ASD in a community employment setting, and have no prior experience with video-based intervention.
2. **Employees/ Clients with ASD**: Must be 14-25 years old with a diagnosis of ASD.

WHAT: The vocational training staff person will receive training on how to create and implement a video-based intervention to teach new job skills to their employees/clients with ASD at their workplace. All study procedures will take place at the job site. This study will include an initial evaluation and two-session training for the staff person, followed by bi-weekly sessions over the course of 2-3 months for the participating pair.

WHY: Video-based intervention is customizable, cost-effective, evidence-based practice that can be used by individuals as an instructional self-prompting support to perform complex skills at work.

At completion of the study, each staff person will receive $100 and their employee/client will receive $50 as compensation for their time and effort.
